Findings

Distraction Index (DI): Right DI = 0.37, Left DI = 0.33.

Osteoarthritis (OA): No radiographic evidence of OA for either hip.

Cavitation/Other Findings: No cavitation present.

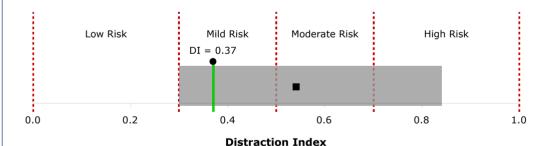

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.37.

OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.

Distraction Index Chart:

LAGOTTO ROMAGNOLO

BREED STATISTICS: This interpretation is based on a cross-section of 534 canine patients of the LAGOTTO ROMAGNOLO breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.30 - 0.84) for the breed. The breed average DI is 0.54 (solid square). The patient DI is the solid circle (0.37).

SUMMARY: The degree of laxity (DI = 0.37) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. **No radiographic evidence of OA for either hip.**
